

E VISHNU TEJA GOUD

Software & Web Developer | Electronics & Microcontroller Specialist

Email: vishnustill.123456789@gmail.com

Address: Ghattu, Telangana, India

GitHub: github.com/vishnuteja-goud

Portfolio: portfolio.dev/vishnuteja

PROFESSIONAL SUMMARY

Detail-oriented and versatile Developer with strong technical foundations in **Web Development (HTML5, CSS3, JavaScript ES6+)**, **Python Programming**, and **Digital Microcontroller Architecture (8051 / 8085)**. Proven track record in engineering interactive web utilities, client-side dynamic tools, algorithmic logic solvers, and hardware logic simulations. Passionate about writing scalable, clean code and building user-centric digital experiences.

TECHNICAL SKILLS

Frontend & Web

JavaScript (ES6+), HTML5, CSS3, DOM Manipulation, Event-Driven Architecture, Dynamic UI Rendering

Programming Languages

Python (Data Structures, OOP, Functions, String Parsing), Assembly Language (8051, 8085)

Hardware & Microcontrollers

8051 Microcontroller, 8085 Microprocessor Architecture, Asynchronous Digital Circuits, Circuit Logic

Developer Tools & Logic

Git, GitHub, VS Code, PRNG Algorithms, Input Validation, UI State Management, Responsive Layouts

KEY PROJECTS

Interactive Web Application & Utility Suite

JavaScript (ES6+), HTML5, CSS3

- Engineered a lightweight, multi-tool web application delivering interactive client-side utilities without external framework dependencies.
- Implemented a customizable **Password Generator Algorithm** using pseudo-random character selection across dynamic set parameters (uppercase, numbers, special symbols).
- Built an interactive **Dynamic Dice Rolling Simulator** with array manipulation and instant DOM image injection.
- Developed a bi-directional **Temperature Converter** (Celsius/Fahrenheit) and real-time mathematical geometry tools.

Personal Portfolio Website Architecture

HTML5, Modern CSS3, JavaScript

- Designed and structured a responsive personal developer portfolio showcase featuring modular project cards, styled code components, and clean visual typography.
- Optimized component layout for multi-device responsiveness and seamless user interaction.

8051 Microcontroller & Embedded Circuit Operations

Assembly Language, Digital Electronics

- Programmed assembly routines for 8051 microcontroller operations, hardware register manipulation, and memory addressing.
- Analyzed asynchronous digital circuits and state tables to evaluate timing diagrams and optimize microcontroller execution loops.

EDUCATION & CORE FOCUS

Bachelor's Degree Focus in Computer Science & Electronics

Relevant Academic Coursework & Technical Specializations

- Data Structures & Algorithms
- Python Software Development
- Microprocessors & Microcontrollers
- Web Technologies
- Digital Electronics
- Object-Oriented Programming
